

F2c Two Zone Music and Movie Server

Multimedia Powerhouse

STORAGE

250GB high speed SATA drive comes standard on all systems. Add NAS storage for growing collections.

MEMORY

A gigabyte of memory allows for lightning fast access to system resources and smooth navigation of growing media libraries.

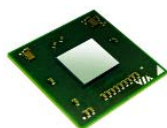

OPTICAL

High speed 18x SATA DVD drives offer rapid and reliable importing of music and movies.

NETWORK

Built-in gigabit Ethernet support speeds data around the home network for nearly instant sharing and streaming of media.

PROCESSOR

Fast and powerful processor and chipset built to handle the demands of managing a growing media library.

F2c packs all the power of ReQuest's Serious Play servers into a compact powerhouse. With enough built-in storage to get you started plus the ability to add up to three NAS devices, F2c can handle a massive amount of archived music and DVD video. Add streaming radio and Pandora support to the menu and your collection becomes nearly infinite.

Automatic dual encoding allows you to listen to high quality music at home while having smaller files for iPods and streaming. NetSync for iTunes lets you keep all your personal music libraries seamlessly in sync with your ReQuest library.

Adding a **MediaPlayer** brings the true power of F2c to your wide screen hi-def television, playing archived DVDs, Blu-ray changer control, YouTube clips, Hulu, and even your Netflix "Watch Instantly" queue. The MediaPlayer even acts like another audio zone, allowing you to stream your music collection to your connected home theater system.

FREE iPhone App Available
